Company Overview

OktoPOS provides a one-stop, store management solution for restaurants and retail shops offering a broad range of functions on a single platform. With more than 18 years of industry experience, OktoPOS is committed to constantly improving and updating its products. The company is headquartered in Germany and the software is licensed internationally.

OktoPOS Cash centrally stores master data—such as articles, touch pad layouts, users, discounts, and customers—then transfers the data to the cash register through an internet connection. Cash register transactions are saved through the internet so sales are visible without delay. If the internet connection is interrupted, the receipts are stored in the cash register and sent later to the central repository. With OktoPOS Cash, the cash register is completely independent from the Wifi network, and the peripherals—cash drawer and printer—are connected directly by USB. Besides ensuring the ability to work offline, this capability has the advantage of eliminating latencies for the printer and cash drawer.

Integration Overview

OPEROktoPOS Cash POS terminals are integrated with the Oracle Hospitality Suite8 property management system (PMS) for billing hotel guest sales on rooms.

Guest information can be retrieved from Oracle Hospitality Suite8 by the guest name, room number or key card. Additional guest information, like VIP status and comments, are visible.

For each billing, OktoPOS Cash sends an inquiry to Oracle Hospitality Suite8 . Once the request is confirmed by Oracle Hospitality Suite8, the bill can be posted to the room.

In the case that billing to the room is denied or if the connection to the PMS is interrupted, the guest can pay with other payment methods or the room can be charged offline. Offline room charges can be transferred manually to the PMS with the room report in the OktoPOS Manager.

ORACLE®
Validated Integration

Oracle Hospitality

Oracle Validated Integration provides customers with confidence that a partner's integration with an Oracle on-premises application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

On the cash register, revenue centers and serving times (breakfast, lunch, dinner, etc.) can be selected.

When using the mobile waiter terminal OrderTab or the OktoPOS E-Menu, room numbers can be entered directly by the waiter or by the guest.

Integration Details

The integration between OktoPOS Cash and Oracle Hospitality Suite8 enables the following:

- Send inquiries to Oracle Hospitality Suite8 PMS to check room occupancy. Inquiries can be done by room number, guest name, or Track2 data (keycard ID).
- Send room postings to Oracle Hospitality Suite8 PMS.
- Send cash or credit card postings to Oracle Hospitality Suite8 PMS.
- Handle the NoPost flag and CreditLimit message received from Oracle Hospitality Suite8 PMS.
- Credit limit override function supported, allowing a POS manager to override any credit limit set up on Oracle Hospitality Suite8 PMS.
- Handle individual postings for each occupant in the room.
- Post covers.
- Void previous postings.
